***Election/Restrictions***

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-26 are drawn to a method and apparatus for processing broadcast programs and related interactive applications at the subscriber's premise, classified in class 725, subclass 136.
- II. Claim 27 is drawn to an apparatus for processing broadcast program control information for transmission from a server, classified in class 725, subclass 146.

2. The inventions are distinct, each from the other because:

Inventions I and II are related as subcombinations disclosed as usable together in a single combination. The subcombinations are distinct from each other if they are shown to be separately usable.

In the instant case, invention I has separate utility such as a set-top box for receiving and executing the display and termination of display of web page hyperlinks on a television display. See MPEP § 806.05(d).

In the instant case, invention II has separate utility such as a server for transmitting time sensitive displayed hot spots or EPG data. See MPEP § 806.05(d).

3. Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.

• Art Unit: 2611

4. Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).
